ends with turmeric. Formerly, all these clothes were made on their own loom, but now-a-days the Santals generally buy what they need from the market of the adjoining town.

**Spinning and weaving**:-The Santals wear cloth prepared on their own loom with their own thread besides purchasing from the market. They raise cotton for their own use. After the cotton is brought in, the first process is ginning. The ginning machine is very simple. It is an upright (drawing) frame work in which two wooden rollers are arranged to run in opposite directions by a sort of gear when the crank attached to one roller is turned. Cotton with seeds are put within the two rollers, and when the rollers are made to revolve, the cotton is separated from the seeds. Cotton is then spread and small bits of cotton are put over a bowstring which is then snapped. This does away with all the lumps and makes the cotton fluffy. It is then made into small rolls preparatory to spinning. Spinning is done by the spinning wheel. Spinning wheels are essentially spindles fitted horizontally into bearings and rotated by means of a cord passing round the threads attached to the two wheels and spindle. The wheels are revolved by hand alone. The spindle consists of a long iron needle, the working end is pointed, the other end is inserted into a fixed horizontal wood. Two wheels are fixed at a distance of about 6 inches to 8 inches apart in wood, a round stone is inserted in it between the two wheels. The two ends of the wood, with which wheels are attached, are placed on two uprights which again are fixed on a base of a "T" shaped wooden frame. The handle is fixed to the wood in which the wheels are fixed.
